

## 2024 SEWERMAIN REHABILITATION PROGRAM

June 2024

### SEWERMAIN REHABILITATION WORK WILL BE STARTING IN YOUR AREA SOON

The purpose of this notification is to advise you of work related to the sewer systems your dwelling is connected to will occur this year. **You *may* have already received a notification from the City's contractor regarding the work. If you have not yet received notification from the contractor, you will be receiving it soon.**

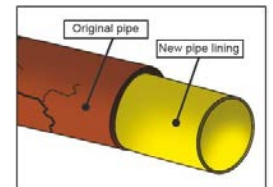

We would like to advise you that our contractor will be installing CIPP in your neighborhood this fall. **Azuria, Insituform Technologies Ltd.**, will have equipment onsite performing the work. Work is expected to start in July and be complete November 2024.

#### Getting Ready for Construction

Preparation work (Stage 1), such as sewer cleaning and inspections, will be completed in July and August. The contractor will then return to your location in between September and November to install the CIPP liner (stage 2). While the install work is being performed, your sanitary sewer connection may be temporarily sealed off or interrupted. In advance of the work, **the contractor (Insituform Technologies Ltd.), will notify you directly if there will be any disruptions to your service** and will be providing you with more specific information and instructions. Most of this work will take place between 7:00 am and 7:00 pm. Service interruptions typically last 3-5 hours.

#### What is the Sewer Rehabilitation Program?

Since 2016 the City of Campbell River has been utilizing trenchless technologies to rehabilitate some of its aging underground infrastructure. When applicable, the city prefers to use a cured in place pipe (CIPP) solution. This technology has proven to be very quick and cost effective when compared to the conventional method involving deep trench excavations and time-consuming surface restoration.

A sewer rehabilitation program is completed each year by the City of Campbell River to improve the underground sewer collection systems within our community. This year we are targeting to rehabilitate approximately 5.8 kilometers of sewermain that are near the end of their serviceable life. Locations for this year's program can be found on the attached map.
